

LandOpt

Announcing LandOpt's NEW Associate Program exclusively at the GIE-Expo!

Successfully managing a landscaping company requires a combination of talent, knowledge, discipline and leadership. LandOpt provides the perfect mix of strategic solutions to grow your business. In fact, we have it down to a science.

Rooted from the traditional offering, the new Associate Program is customized for smaller landscape companies looking to make big waves in the green industry. Powered by LandOpt organizations learn and apply financial planning, a team culture with accountability, and empowerment resulting in greater profitability.

LebanonTurf

Lebanon Pro PCU Products

New to the LebanonTurf line up are three new products that use polymer-coated urea (PCU) as a source of controlled-release nitrogen. These products use high-quality, turf-grade components that you have come to expect from LebanonTurf. The PCU releases nitrogen for up to 12 weeks, making it the perfect choice for spring- or fall-season applications. All three products contain biosolids as another source of controlled-release nitrogen, which reduces the amount of filler in each bag.

- 18-24-12 25% PCU Starter Fertilizer
- 18-0-3 40% PCU with 2% Iron
- 25-0-6 30% PCU with 2% Iron

These products add to an already strong lineup of fertilizer products from LebanonTurf. Our *Best of All Worlds*® philosophy brings you the broadest portfolio of turf establishment and maintenance products in the industry.
