

Smith Performance Sprayers

Smith Performance Sprayers NL400

You no longer need both a piston and diaphragm pump sprayer. The NL400 No Leak Pump Backpack Sprayer features an internal piston pump with agitation paddles allowing you to spray both wettable powders and liquids. The internal pump ensures chemicals stay in the tank where they belong instead of leaking down your back. The deluxe harness has pressure dispersing 3-inch-wide shoulder straps with a fully lined back cushion and lumbar support to ensure maximum comfort while on the job. Tested to over 1,000,000 pump cycles, 3x longer than the nearest competitor, this workhorse will not let you down on the job.

SnowEx

SnowEx® Scrape Maxx™ Adds Down-Force Ability to All Existing SnowEx Truck Plows.

SnowEx® Scrape Maxx is an exclusive accessory kit that gives existing SnowEx plows the ability to apply active downward force to bust through hard packed snow, back drag more effectively, and maximize scraping performance down to the pavement.

SnowEx plows are already built with this ability, but Scrape Maxx harnesses the power to deliver the correct force. This is particularly advantageous for SnowEx Light-Truck and Regular-Duty plows. By increasing down-force, Scrape Maxx effectively allows lighter-duty plows to deliver commercial-grade performance. The technology improves back dragging and overall clearing capabilities without needing to upgrade to a larger vehicle or heavier plow.

On heavier plows, Scrape Maxx provides additional force to keep the blade against the surface, delivering a cleaner scrape on uneven terrain. Installation and user control is easy. Operators simply hold the down button to engage the feature, and Scrape Maxx does the rest.
