

Greenius

Greenius, by LS Training, is a suite of fully mobile, online learning tools for any grounds worker, for the purposes of onboarding and training new employees, and as a refresher for existing workers.

With over 30 equipment videos for the workers, in both English and Spanish, and eight videos for crew leaders/foremen and managers, Greenius is for those owners and managers who want to streamline their processes and procedures while improving communication. Getting people to work in this industry is tough! The workforce is getting older, forcing the need to hire younger and more inexperienced workers.

Investing in your biggest asset — people — is one of the ways to lead this industry into a new day and time. It's quite simple — people want to know they are valued, and that you care.

“ One of our biggest company challenges was finding good training that delivered a consistent message, and was flexible and cost-effective. Greenius allows us to train whenever we want — at home, in a group or both — with very little prep time and company resources. By watching the video, employees grasp the concepts visually, then they test on it to ensure they learned it. We've had a decrease in blunders and breakage of 2-cycle equipment. Training is something I don't worry about anymore. It has given me peace of mind knowing it is being done.”

Honda

The Honda Miimo robotic lawn mower uses a microcomputer, timer and sensors to provide automated, unattended grass cutting within a defined lawn area. Honda's lithium-ion, battery-powered robotic mower delivers quiet operation, recharges quickly and offers three different programmable cutting patterns with a programmable timer setting for easy, beautiful lawn care.

Two available Miimo models — HRM310 and HRM520 — maintain lawns for consumer and commercial applications with a continuous cutting system. Both mowers operate within a boundary wire, installed by Honda Power Equipment dealers underground or on top of the ground around the perimeter of the area to be mowed, and a combination of controls, timers and real-time sensory feedback.

Depending on lawn size and complexity, the two available Miimo models make easy work of grass cutting: the HRM310, cutting up to 0.37 acres and HRM520, cutting up to 0.75 acres. In addition, Honda Miimo's quick turn mechanism allows the unit to change direction in a sweeping forward motion rather than having to reverse itself — a feature that reduces overall cut time.

Miimo is on sale now at select Honda Power Equipment dealers in the United States. More information about the Honda Miimo is available via miimo.honda.com.
